

Templify — Capital Requirements & Roadmap

Date: 23 May 2026

From: Manuel Caballero, Founder, Templify

Templify is a SaaS platform for bulk template design: identification cards, member cards, certificates, and event credentials. The product is built. The remaining work before recognised revenue is administrative: Philippine business registration, PayMongo Live activation, and a move from free-tier to commercial-tier hosting.

1. Operational Status

Feature-complete and tested end-to-end in PayMongo test mode. Editor, project persistence, plan-limit enforcement, subscription-expiry cron, Cloudflare R2 storage, free-tier export watermarking, locale-aware pricing, Google OAuth, and PayMongo checkout are all in production.

2. Path to Revenue

Business registration (2–3 weeks). DTI national scope, BIR Certificate of Registration with Books of Accounts and Authority to Print, Barangay and Mayor's Permit in Bicol, NPC registration as Personal Information Controller. BIR is the timeline-critical path.

PayMongo Live activation (3–10 business days). Submitted after BIR Certificate of Registration is issued, with links to the published compliance pages.

Production cutover (1 day). Vercel Pro, Supabase Pro, production domain with SSL, PayMongo live-mode environment variables.

Total elapsed time from funding to first revenue: four to six weeks.

3. Capital Requirements

Figures in Philippine pesos. USD items converted at ₱61.60 per US dollar (BSP, 22 May 2026).¹

One-time launch costs

Item	PHP
DTI Business Name (national scope, incl. ₱30 DST)	2,030
BIR Books of Accounts + documentary stamps	500 – 1,000
BIR Authority to Print receipts (1–2 booklets)	500 – 3,000
Barangay Clearance	200 – 500

Mayor's Permit, Bicol provincial LGU	2,000 – 5,000
Community Tax Certificate	100 – 500
Production domain, one year	602
Compliance pages, generator to lawyer-reviewed	0 – 15,000
Contingency (permit revisions, accountant onboarding)	5,000 – 10,000
Total	11,000 – 38,000

BIR Annual Registration Fee abolished 22 January 2024 under the Ease of Paying Taxes Act.²

Recurring monthly costs

Item	PHP / month
Vercel Pro	1,232
Supabase Pro	1,540
Cloudflare R2 storage (free tier through month six)	0 – 600
Accountant, quarterly filings amortised	1,500 – 3,500
Mayor's Permit and domain, amortised	350 – 700
Total	4,600 – 7,600

Total capital ask

Bucket	PHP
One-time launch costs	11,000 – 38,000
Operating runway, three months	14,000 – 23,000
Paid acquisition budget, six months at ₱10,000 per month	60,000
Contingency reserve	17,000 – 24,000
Total	102,000 – 145,000

4. Unit Economics

Pro tier ₱299/mo, Business tier ₱799/mo. Quarterly and annual discounts standard. International pricing +33%.

PayMongo fees:³

Method	Fee
Card, domestic	3.125% + ₱13.39

Card, international	4.02% + ₱13.39
GCash	2.23%
Maya	1.79%
QR Ph	1.34%

Net per ₱299 Pro Monthly: ₱276 (card) to ₱295 (QR Ph). Model uses ₱276. Break-even at ₱6,100/mo fixed: 23 subscribers. One Business subscriber contributes ₱761 ≈ 2.75 Pro.

Subscribers	Net contribution	Fixed cost	Operating result
50 Pro	₱13,800	(6,100)	7,700
100 Pro	₱27,600	(6,100)	21,500
250 Pro	₱69,000	(7,000)	62,000
500 Pro	₱138,000	(8,000)	130,000

5. Growth Milestones

Twelve-month targets, not committed to specific calendar months:

Milestone	Subscribers	Operating result
Initial profitability	25 Pro Monthly	~₱800 / month
Steady-state runway	70 Pro Monthly	~₱13,000 / month
Twelve-month target	150 Pro Monthly	~₱35,000 / month
Year-two target	250+, shifting toward Business tier	₱62,000+ / month

Targets assume CAC below ₱550. CAC above ₱700 triggers strategy review (tier mix, pricing, channel).

6. Key Unknowns

Three variables in the model are assumed, not measured. The six-month marketing budget exists in part to convert them to data.

Demand validation. No live paid transactions yet. Conversion below 2% at target CAC indicates a pricing or positioning issue.

Customer-acquisition cost. Observed PH range for prosumer software is ₱400–₱1,200. First three months establish where Templify lands.

Net revenue retention. No churn data yet. Adjacent SMB SaaS runs 3–7% monthly. Above 5% forces re-modeling of Section 5 targets.

These unknowns do not change the capital ask. They define what the capital is being used to find out.

7. Capital Allocation

Allocation	Outcome
Business registration and compliance	PayMongo disbursement to a PH bank account becomes possible.
12 months of commercial-tier hosting	Vercel Pro, Supabase Pro, daily backups.
6 months of paid acquisition testing	CAC validation; target <₱550 = 2-month payback.
Operational reserve	First-quarter accountant fees and contingency.

8. Risk Factors

BIR processing. Timeline-critical. DTI and BIR filed in parallel; accountant retained to expedite.

PayMongo KYB. Documents and live compliance pages prepared in advance of submission.
